

Embase for Pharmacovigilance

Search Strategy Creation and Validation

Ivan Krstić, PhD
Senior Product Development Manager Embase

March 22th 2017

Agenda

Ensuring
regulatory
compliance

EUROPEAN MEDICINES AGENCY
SCIENCE MEDICINES HEALTH

In this webinar, we will discuss:

- Literature Screening for Pharmacovigilance – Intro
- Tips and Tricks – Embase Search Syntax
- How to Build a Search Strategy on Embase for PV Based on Industry Best Practices
- Demo – PV Wizard on embase.com

Pharmacovigilance

Pharmacovigilance is defined as the science and activities concerned with:

- **detection (Embase),**
- **assessment (Quosa PV),**
- understanding and
- prevention

of **adverse reactions** to medicines.

The **ultimate goal of Pharmacovigilance** is to **improve the safe and rational use of medicines**, thereby:

- **improving patient care** and
- **improving public health.**

Blood pressure drugs
linked to
hyperactivity risk

**PROSTATE DRUG
LINKED TO MALE
BREAST CANCER**

Cancer worry over blood pressure drug Epilepsy drug link to birth defects found

**CANCER FEARS OVER
CHOLESTEROL
TREATMENT**

Regulatory Mandate for Literature Screening

- EMA's Good Vigilance Practice (GVP) [Module VI](#)
- Code of Federal Regulations, [Title 21, parts 314.80.b](#)
- Code of Federal Regulations, [Title 21, parts 600.80.b](#)

EMA requirements (GVP Module VI)

VI.B.1.1.2. Literature reports

The scientific and medical literature is a significant source of information for the monitoring of the **safety profile and of the risk benefit balance of medicinal products**, particularly in relation to the detection of new safety signals or emerging safety issues. Marketing authorization holders are therefore expected to maintain awareness of possible publications through a **systematic literature review of widely used reference databases** (e.g. Medline, Excerpta Medica or **Embase**) no less frequently than once a week...

Reports of suspected adverse reactions from the scientific and medical literature, including relevant published **abstracts from meetings and draft manuscripts**, should be reviewed and assessed by marketing authorisation holders to identify and record ICSRs originating from spontaneous reports or non-interventional post-authorisation studies.

In addition, marketing authorisation holders should have procedures in place to **monitor scientific and medical publications** in **local journals** in countries where medicinal products have a marketing authorisation, and to bring them to the attention of the company safety department as appropriate.

Local literature project in pipeline. Interested?
Contact as at: embase@elsevier.com

Regulatory Compliance

Without Embase, critical ADR's might be missed, risking:

- Possible fines due to non-compliance
- Damage to company reputation
- Likelihood of review by gov't body

Why Embase?

- Comprehensive (8,600 journals, also AiP)
- Current (6,000 records/day)
- Deep indexing
- ADR subheadings
- Search for classes of drugs/ devices
- Weekly alerts
- Automate content delivery – API
- Lit. monitoring solution with QUOSA (PV)
- Includes grey literature (conference abstracts)
- 2,800 more journals than MEDLINE
- Recommended and used by EMA

Search Strategy for Literature Monitoring

Importance of Search Strategy in Literature Monitoring

Some consider that **search strategy creation and maintenance** should be handled as a **GxP** activity, needing **Verification and Validation**, as any other GxP process.

Although there is no specific regulatory mandate, the Literature Monitoring process can be (and in fact is) **inspected** and **audited**.

It is a field in which a QPPV must be ready to answer questions, and it must be described in the Pharmacovigilance System Master File (PSMF).

Search Strategy for Literature Monitoring

Validation of a search strategy consists of **documenting evidence** that a specific **search strategy** consistently produces a **set of records** meeting its pre-defined quality attributes.

Information science defines **Precision** and **Recall** as the two quality attributes of a search strategy.

Precision: How many of the records in the result set are relevant to our need

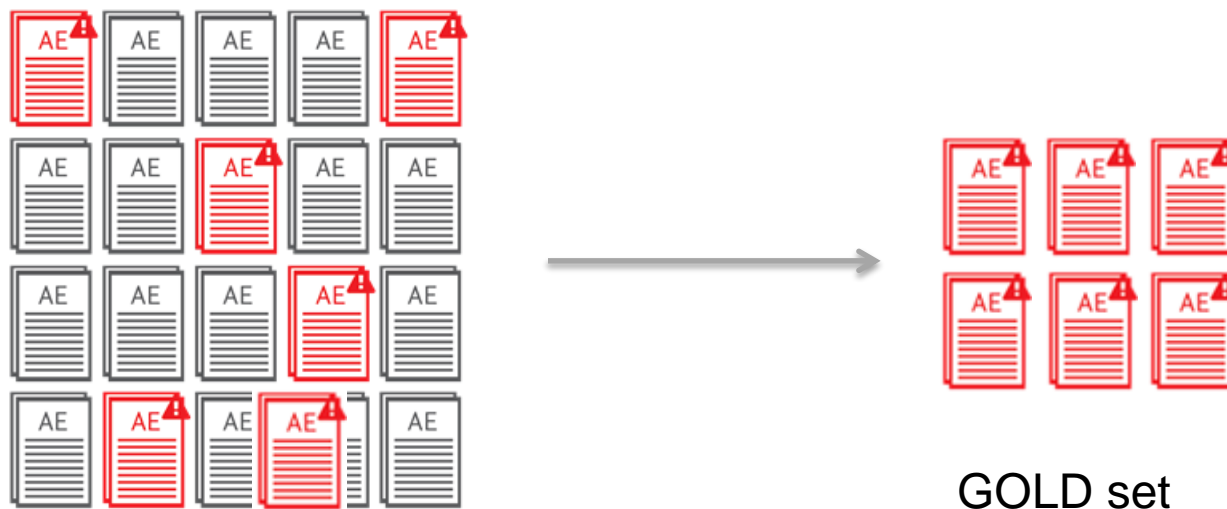

Recall: From all records that are relevant to our need, how many are present in the search result

Prerequisite

Presence of a **GOLD data set** from all known **relevant articles** for a limited time frame (no less than 150 articles)

e.g.: 2014-2017

MAH's Safety Database

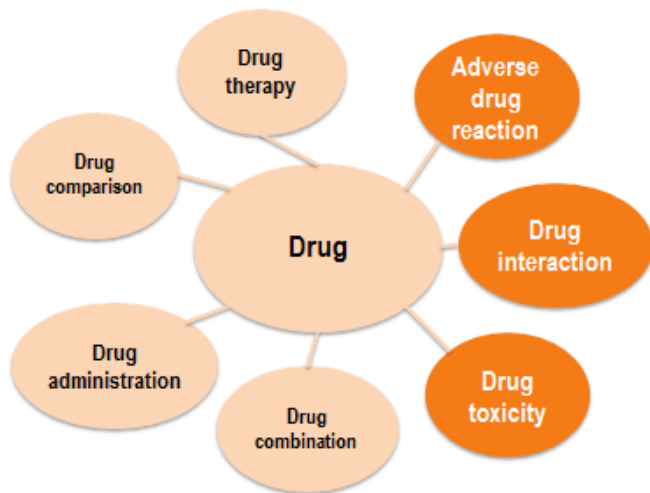

GOLD set

How to build search strategy – general tips

- Leverage **in-depth indexing** of drugs on Embase and use **Emtree terms** and **subheadings**.
- Text searching of the **title, abstract** required, as a supplementary measure.
- Great understanding of all the **fields** (meta data) available in the database (e.g.: **tradenames**)
- Good knowledge of the **search syntax** is required, e.g: **Boolean** and **proximity operators, wildcards**.
- Good understanding of the medicinal product properties and known interactions may also help.

Reminder: subheadings

Subheadings are Emtree terms that are also used as **concept qualifiers** for drugs to provide additional information about **context**.

Treatment of chronic non-malignant pain in the elderly: Safety considerations

Barber J.B., Gibson S.J.

Drug Safety 2009 32:6 (457-474)

Go to publisher for the [full text](#)

Abstract

Non-malignant pain in the elderly is frequently under-treated, with physicians appearing to be uncertain concerning how best to manage it. The central objective of this review is to provide a brief overview and discuss the variety of interacting factors that contribute to the continuing problem of pain in the elderly. The central objective is to encourage safer and more effective pain management in a population that is highly vulnerable to painful pain as experienced by the elderly is largely a consequence of uncertainties that arise within a complex environment that is unresponsive to pain management. Uncertainties include the optimum management of pain in geriatric syndromes, frailty and dementia, and their impact on the elderly. An inadequate evidence base for pharmacological interventions in older persons with respect to pharmacokinetic and pharmacodynamic changes, the incidence of adverse drug reactions are identified as factors that encourage conservatism in prescribing, as are many other factors. The use of medications and polypharmacy. The major classes of analgesic drugs are summarized with reference to their mechanisms of action and associated risks, the use of analgesics in managing persistent pain in elderly people is widely supported and guided on the basis of clinical evidence. It is concluded that the absence of trial data, specific to the elderly, is substantially offset by information based on clinical experience. Analgesic and adjuvant treatments can and should be employed to relieve persistent pain in the expanding elderly population.

Drug Terms

acetylcysteine, acetylsalicylic acid, analgesic agent, anticoagulant agent, anticonvulsive agent, antidepressant agent, codeine, corticosteroid, cyclooxygenase 2 inhibitor, dipeptidyl carboxypeptidase inhibitor, diuretic agent, oxidase inhibitor, morphine, narcotic analgesic agent, neuroleptic agent, nonsteroid antiInflammatory agent, noradrenalin reuptake inhibitor, serotonin uptake inhibitor, tricyclic antidepressant agent, unindexed drug

paracetamol	
Key Subheadings	
adverse drug reaction	drug hypersensitivity, dyspepsia, gastrointestinal toxicity, hematologic disease, liver failure, nausea, nephrotoxicity
drug combination	acetylsalicylic acid, codeine, cyclooxygenase 2 inhibitor, narcotic analgesic agent, nonsteroid antiInflammatory agent
drug interaction	anticoagulant agent, anticonvulsive agent, hypnotic sedative agent
drug therapy	chronic pain, musculoskeletal pain
Other Subheadings	
drug administration, drug concentration, drug dose, drug toxicity, oral drug administration, pharmacokinetics, pharmacology	

Reminder: Search syntax

Truncation / Wildcards

* (replaces one or more letters)	sul*ur	retrieves sulfur, sulphur
	'heart attack*'	retrieves heart attack, heart attacks
? (single-letter truncation)	sulf?nyl	retrieves records that contain words like 'sulfonyl' and 'sulfinyl'
	catheter?	retrieves records that contain words like 'catheters', but not 'catheter' or 'catheterization'

Proximity operators

NEAR/n	drug* NEAR/2 adverse	The words must be within n words inclusive of each other in the record
NEXT/n	adverse NEXT/2 reaction*	The words must be within n words inclusive of each other in the same order as they appear in the search form

Reminder: Search syntax

Field codes

:ab,ti (in abstract or titles)	'heart attack':ab,ti	This option retrieves records where the phrase 'heart attack' is found in the title or abstract.
:de (Emtree term)	'heart attack':de	This option maps your search terms to the Emtree preferred indexing term.
/exp (term explosion)	'heart attack'/exp	This option maps your search terms to the Emtree preferred indexing term and then searches for the related narrower (children) terms.
/lnk (subheading)	'side effect'/lnk	Subheadings are concept qualifiers for drugs, diseases or devices used to refine context.

GVP Module VI

VI.B.1. Collection of reports

Competent authorities and marketing authorisation holders should take appropriate measures in order to **collect and collate all reports** of **suspected adverse reactions** associated with medicinal products for **human use** originating from unsolicited or solicited sources.

VI.B.6. Special situations

VI.B.6.1. Use of a medicinal product during **pregnancy** or **breastfeeding**

VI.B.6.2. Use of a medicinal product in a **paediatric** or **elderly** population

VI.B.6.3. Reports of **overdose**, **abuse**, **off-label use**, **misuse**, **medication error** or **occupational exposure**

VI.B.6.4. **Lack of therapeutic efficacy**

Set up an Email Alert

The screenshot displays the Embase search interface. On the left, there is a sidebar with filters for 'Publication years', 'Authors', 'Conference Abstracts', 'Drug Trade Names', 'Drug Manufacturers', 'Device Trade Names', and 'Device Manufacturers'. The main search results area shows '33,975 results for search #2'. A 'Set email alert' button is highlighted with a red box. A dialog box titled 'Set Email Alert' is open, containing the following fields and options:

- Alert name:** A text input field with the placeholder 'Type the name of your search here'.
- Comments (optional):** A larger text input field.
- Email address(es):** A text input field containing 'i.krstic@elsevier.com'.
- Email format:** Radio buttons for 'HTML' (selected), 'Text', and 'RIS (as an attachment)'.
- Content selection:** A dropdown menu set to 'Citations only'.
- Frequency:** A dropdown menu set to 'Every week' on 'Monday'.
- Alert sent:** A checkbox for 'Send an alert only when there are results'.
- Articles in Press and in Process:** A checked checkbox for 'Include'.

At the bottom of the dialog are 'Cancel' and 'Set email alert' buttons. The background search results list includes:

- 1. Prenatal paracetamol use and asthma in... Fan G., Wang B., Liu C., Li D. [Article in Press] *Allergologia et Immunopathologia* 201...
- 2. Effect of tramadol/acetaminophen on m... Tetsunaga T., Tetsunaga T., Tanaka M., Nishida K., Takei Y., Ozaki T. *Pain Research and Management* 2016 2016 Article Number 7458534
- 3. Granulomatous lobular mastitis in pregnancy: A case report Ilhan B., Kilic B., Bademler S., Ozgur I., Turkey R., Karanlik H.

Email Alert history can be exported

The screenshot displays the Embase® Email Alerts management interface. At the top, there is a navigation bar with the Embase® logo, search and browse options, and user information (Ivan Krstic). The main section is titled "Email Alerts" and contains a table of alerts. The table has columns for "Last results", "Sent on", and "Status". The alert #26, titled "apixaban", is highlighted in yellow, and its "Export history" button is circled in red. To the right of the table, the "Alert details" panel is visible, showing the alert name "apixaban" and a complex search query.

	Last results	Sent on	Status

Demo

The screenshot displays the Embase® PV wizard interface. At the top, the Embase logo is on the left, and navigation links for Search, Browse, Results, My tools, Select Language, Register, Login, and a notification bell are on the right. The main content area is titled "PV wizard" and features a progress bar with five steps: "Drug name" (active, marked with an orange dot), "Alternative drug names", "Adverse drug reactions", "Special situations", and "Human limit". Below the progress bar, the "Drug name" section contains a text input field with the example "e.g. Paracetamol" and a "Clear field" button. Underneath, there is a "Subheadings" section with a grid of checkboxes: "Adverse drug reaction" (checked), "Drug toxicity" (checked), "Drug interaction" (checked), "Drug combination" (unchecked), "Drug comparison" (unchecked), and "Drug therapy" (unchecked). A "Note" box on the right states: "Note: Drug name will be searched as: [drug]/[subheading] OR [drug]-induced:de,ab,ti". At the bottom, there are two buttons: "Show 0 results" and "Next step".

Please contact us at if you are interested in testing the PV wizard?

embase@elsevier.com

Regular Reviews of the PV Search Strategy

- Emtree updates three times per year
- New search artefacts can be introduced
- New indexing policies can be enforced
- Always perform the review maintaining **documented evidence** that a specific search strategy consistently produces a record set meeting its pre-determined quality attributes

Thank you!

Any questions?

Import EMA's MLM search

Once a search is run from saved search space it gets displayed on results page as any other regular search.

The screenshot displays the Embase web interface. At the top, the Embase logo is on the left, and navigation links for Search, Browse, Results, and My tools are in the center. On the right, there is a language selector, user information (Ivan Krstic), and a Logout button. Below the navigation bar, the 'Saved Searches' section is active, showing a folder named 'EMA's MLM' with a sub-folder '5-Fluorouracil'. The search results page for '5-Fluorouracil' is shown, featuring a table with one search result. The table has columns for Name, Last Update, Creation Date, and Results. The search result is a complex Boolean query for 5-Fluorouracil and its various synonyms and related terms.
