**Release Notes Embase 2021.02 (October 7ᵗʰ, 2021)**

The October 2021 release of Embase includes the following updates in the application:

FEATURES

1. Citation Information search framework

A new tab "Citation Information" has been added to the Search tab. With this we have combine both "Article" and "Authors" in one module where both functionalities are present. You can now combine author name variations with citation information (article title, DOI, ISSN…).

Former "Authors" functionality is now accessed clicking on "Citation Information" and selecting "Specify name variants" from the form.

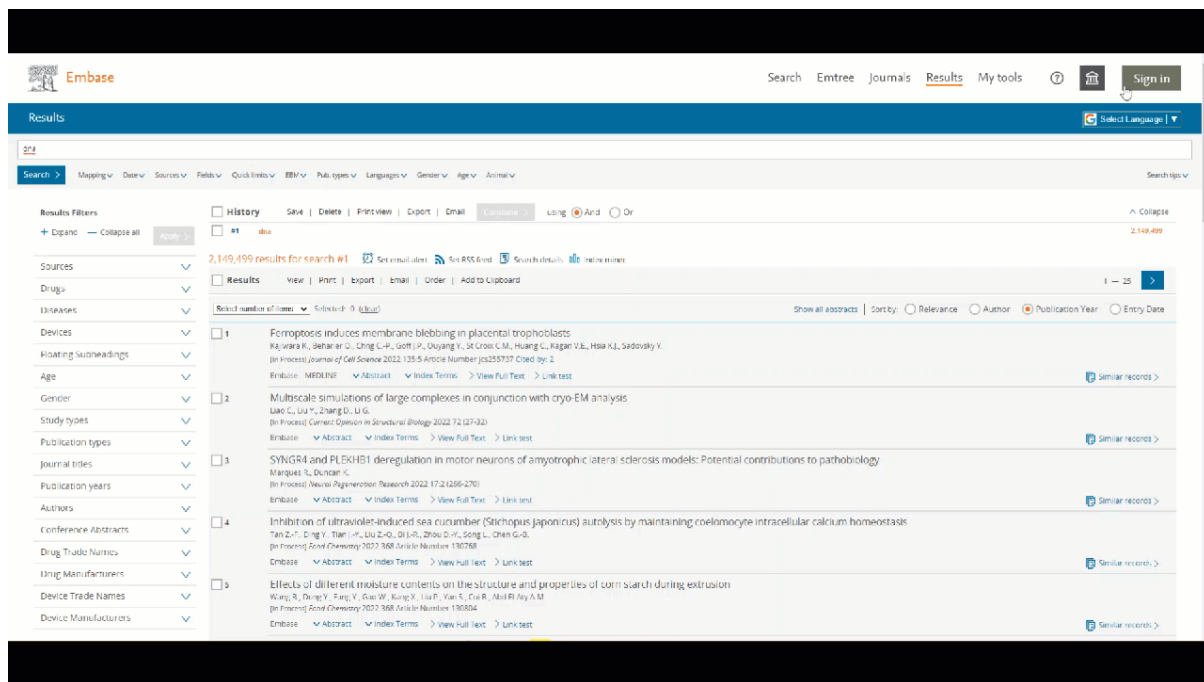

This means that the "Author" search on the top toolbar will be deleted and the current "Article" search will be changed to "Citation Information".

2. Non-signed in users record export changes

As suggested by a few of our users we have lifted the restriction for non-signed in users to export documents on Embase.com.

Non-signed in users will be able to export as before with a limitation of 500 records per batch. 500 records are the maximum number of records that can be sent to the clipboard or viewed in the record details page at once.

3. SAML user workflow changed for a faster and seamless user experience

User will be now sent to the landing page as an authorized non-signed in user directly after authenticating themselves in their organization via WAYFless URL or SAML. Before there was an extra screen asking for sign in or to "Continue without personalization".

4. Same number of results when rerunning alerts

We fixed the issue where for some terms, rerunning the alert that contained them resulted in significantly less results.

BUGS AND MINOR IMPROVEMENTS

- Fixed a bug where scrolling in PICO page was not allowed after a certain point and was preventing users to write in the "Study type" box.
- Fixed a bug where the State was missing in correspondence address field in all export format.
- Fixed a bug that prevented to delete more than 500 records from the clipboard or the saved clipboard.
- Fixed a bug where in the usage statistics the total number of searches was not the sum of the different search types.

- Fixed a bug where adding truncation resulted in less results. For example, cellphone and cellphone*.
- Fixed a bug where setting up a RSS feed was deleting the whole search history.
- Fixed a bug that prevented the record details page to be fully displayed in Internet Explorer 11
- Fixed a bug where there was an error in highlighting with terms that could contain a hyphen or a example between them. Application was highlighting both terms per separate. For example: 'type a'
